Company Overview

Advance Track System (Pvt) Ltd is a GPS tracking and fleet-management company headquartered in Pakistan, operating a nationwide installation network and an in-house 24/7 control room. Our platform is built and operated by our own engineering team — the same system powers our internal ERP, CRM, finance and control-room operations, which means the reliability we sell is the reliability we depend on ourselves.

Enterprise Capabilities

Fleet Operations
Live tracking, trip history, route planning with planned-vs-actual comparison, and utilization reporting across branches.

Security & Response
24/7 theft monitoring, SOS handling, remote immobilization with speed-safety interlocks, and incident escalation.

Corporate Accounts
Multi-user access with roles, per-fleet visibility for managers, and consolidated billing.

Compliance & Reporting
Audit-friendly trip, speed, idling and maintenance reports, exportable for internal review.

Delivery Footprint

Certified installation teams operate in every major city with coverage along the national motorway network. Corporate rollouts are phased by region with dedicated onboarding, driver briefing support and SLA-backed after-sales service.

Why Companies Choose Us

- **Own infrastructure** — platform, control room and installation teams under one roof.
- **Bilingual experience** — English/Urdu web portal and mobile apps for every user level.
- **Data security** — encrypted data in transit and at rest, role-based access, tenant isolation.
- **Transparent commercials** — package pricing with installation, SIM and monitoring included.
- **Local accountability** — a Pakistani company with named account managers, not a reseller.

Engagement Model

- **Pilot** — start with a subset of vehicles to validate fit and reporting.
- **Rollout** — phased installation by region/branch with progress reporting.
- **Operate** — 24/7 monitoring, quarterly reviews and continuous driver-behavior insights.
